

ABSTRACT

A self-control traveling system for an expressway and a method for controlling the same is disclosed. A plurality of road signs are consecutively installed at left and right sides of the expressway. An imaging device images the road signs arranged along the expressway. An image processor analyzes
5 at least one image, discriminates the roadside signs and reads sign contents contained in the roadside signs. A navigation database stores map information of the expressway. An artificial intelligence-electronic control unit determines a current position and a road state on the basis of the map information stored in the navigation database and the sign contents read by the image processor. An integrated ECU controls a steering operation, a speed decrement/increment operation and others associated with the self-
10 control traveling operation according to a result of the determination.
